

To Contractors for Invitation for Bids for Demolition of Elliott Building:

The following questions were received from vendors. In order to keep everyone informed, here are the questions and answers:

1. Can you give us quantities of the asbestos to be removed so everyone will bid the same amounts? See page 1 of Asbestos Technical Specifications prepared by HDH Technical, Inc., Part 1, Section 1.01B.
2. Can we get a drawing showing where the samples were taken? See page 1 of Asbestos Technical Specifications prepared by HDH Technical, Inc., Part 1, Section 1.01B. All footage and locations are approximate. See photos in survey provided. Existing conditions to be verified by the Contractor.
3. The scope of work calls for leaving the “basement of building intact ...” does this mean leaving all basement level walls and floor in place? Yes, leave all the basement walls and concrete floor. If not, will we need to remove the walls and concrete floor and then backfill the basements to existing grade level. If so can you provide a spec for backfill material and compaction rating? Not applicable based on answer to first part of the question.
